DETAILED ACTION

This restriction is to correct the incorrect groupings in the previous office action.

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-36 are, drawn to a process for preparing a silicon single crystal, classified in class 117, subclass 13+.
- II. Claims 37-43 are, drawn to a single crystal silicon ingot, classified in class 423, subclass 348+.
- III. Claim 44, drawn to a population of wafers, classified in class 428, subclass 64.1+.
- IV. Claim 45, drawn to a population of wafers, classified in class 428, subclass 446+.

The inventions are distinct, each from the other because of the following reasons:

Inventions (II, III, or IV) and I are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case the product as claimed can be made by another and material different process, such as a method where N_{vac} is less than 1 or the process can be used to make other and materially different product such for Group II, the process can be used to make wafers instead of an ingot and for Groups III, IV, the process can be used to make an ingot instead of wafers.

Inventions II and (III or IV) are related as mutually exclusive species in an intermediate-final product relationship. Distinctness is proven for claims in this relationship if the intermediate product is useful to make other than the final product (MPEP § 806.04(b), 3rd paragraph), and the species are patentably distinct (MPEP § 806.04(h)). In the instant case, the intermediate product is deemed to be useful as a test substrate and the inventions are deemed patentably distinct since there is nothing on this record to show them to be obvious variants. Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions anticipated by the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one

or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
